## Housekeeping

- This session qualifies for 1 CPE credit.
- Please make sure you sign in on the sheet.
- You must complete the survey through the QR code at the end in order to receive your CPE certification.
- The survey can be completed using your mobile device. Optional paper surveys are available and must be turned in at the registration desk.
- Please silence your mobile device during the presentation.

# Introduction

**Dennis Guiney**  
Senior Technical Consultant

## Session Objectives

- Eliminate duplicate data entry, Streamline operations, Integrate systems
- Reduce Errors
- Break down silos, Create cohesive company view

## Design Questions

- Do we need standalone reporting (all data in Community Brands MIP)
- What is key data needed for reports and what are the lookup/search options desired
- Do we need subledger synchronization (Vendors, AP, Customers, AR)
- What are the sequential steps to replace parallel methods
- Maintain any reconciliation process already in place

## Building Blocks

- Reporting Needs
- Data and Work Flow / Integration Mapping
- Def Files or Rest Based API
- Documentation

## Reporting Needs

- Is data source to act as a reportable subledger (do we only need summary information, do we want enough detail to link back to individual dates/records, do we want all information in Community Brands MIP.)
- Review reports in subledger for Community Brands by accounting – do codes/names match, is there enough detail

## Reporting Needs

- Any UDFs needed (statistical, index, search needs)
- Verify final reports (Budgeted Revenue and Expense, General Ledger Detail or Posted Transaction Reports, Budget Analysis including Statistical)

## Data / Work Flow

- If done manually, review current entry compared to source data
- Is mapping table required to translate source data for MIP, can we use a simple list vs lookup
- Any fields missing that are needed for MIP
- If source data is amended after export, can we tell / how do we update MIP
- If we void/amend data in MIP after import, can we tell / how do we update source
