

COMPLEAT

for Non-Profits

Purchasing & Accounts Payable Automation built for non-profit organizations like yours

Empower colleagues in non-profit, charity, and government organizations of all sizes to make smart spending decisions.

Compleat delivers five key benefits to the non-profit sector

1. Automating purchases with key vendors such as Amazon Business significantly saves time.
2. Dynamic workflows provide visibility, control, and enforces proper approval structures.
3. Automated invoice matching directly integrated into your accounting software frees up staff to focus on more important tasks.
4. Management and budget holders track all spend data to optimize budgets.
5. Compleat helps you make significant savings on what you already buy.

How?

Every non-profit organization, regardless of size, understands the importance of robust processes in controlling and accounting all purchases to optimize every dollar spent.

Many of our non-profit customers have achieved this by introducing Integrated Online Buying, creating significant savings as colleagues buy directly from preferred vendors like Amazon Business, Office Depot, and Staples at the best prices, without overwhelming the finance team.

An additional major benefit is the ability to use group or parallel approval workflows, which streamline the approval process across multiple groups or regions. Efficiency is further enhanced by invoice matching and accounts payable automation, which reduces manual tasks.

Our Amazon Business integration

We work closely with Amazon Business to make purchasing for your organization as simple as possible and we believe we've done just that with our Punch-in integration.

It's simple, users log into Amazon Business, select what they need to buy and then submit for approval. the request is automatically sent to budget holders to approve (or deny!), once a purchase is approved, the order is automatically completed in Amazon Business and sent for delivery!

What our customers have to say

“Our objective was to create a ‘beachhead’ implementation that clearly demonstrated that purchase automation could be easy to use, provide budget holders with real time information on spend and deliver a formal approval process prior to generation of an order”

- Zoological Society of London

“Compleat Software saves us a significant amount of time within our Accounts Payable process, removing manual data entry, invoice storage and providing streamlined approvals. Invoices are digitally captured, defaults are set against many of our GL Accounts, funds, units, and projects, reducing manual coding and invoices are routed for approval to our heads of department, our team has real-time visibility over every transaction by status, speeding up processing times and increasing productivity”

- American Liver Foundation
